

Dear Sir:

I understand that you're trying to limit satellite radio's ability to do local weather and traffic. I depend on my XM radio for all my information out West. Out here the radio stations are few and far between when you leave the cities, so it's important to be able to get traffic and weather when you're isolated from the local stations.

It would be greatly appreciated if you ignored the wishes of the NAB and let the average citizen(voter) get the local traffic and weather from our satellite radios..

thanks,

Fred Stroud
